INTERNATIONAL SEARCH REPORT

International application No.

PCT/US04/28831

Box No. II	Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)
This internation	onal search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
ı. 🛚	Claims Nos.: 194-198 because they relate to subject matter not required to be searched by this Authority, namely: the claims are directed to a mathematical expression.
2.	Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. 6.4(a).	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule
Box No. II	Observations where unity of invention is lacking (Continuation of Item 3 of first sheet)
This Internat	tional Searching Authority found multiple inventions in this international application, as follows: Continuation Sheet
	•
	·
	·
1.	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2.	As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite
3.	payment of any additional fees. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark or	payment of a protest fee.
	The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.
	No protest accompanied the payment of additional search fees.

BOX III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-50, drawn to a method of forming a tubular liner within a preexisting structure.

Group II, claim(s) 119-122, drawn to an expandable tubular member.

Group III, claim(s) 123-126, drawn to an expandable tubular member...

Group IV, claim(s) 127-134, drawn to a method of radially expanding and plastically deforming a tubular assembly.

Group V, claim(s) 135-141, drawn to a method of manufacturing a tubular member.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of the claims of Group I is a predetermined portion of the tubular assembly having a lower yield point than another portion thereof prior to the radial expansion and plastic deformation of the tubular assembly.

The special technical feature of the claims of Group II is the expandability coefficient of the expandable tubular member being greater than the expandability coefficient of another portion thereof.

The special technical feature of the claims of Group III is the tubular member having a higher ductility and a lower yield point prior to a radial expansion and plastic deformation than after the radial expansion and plastic deformation.

The special technical feature of the claims of Group IV is the use of less power to radially expand each unit length of the first tubular member than to radially expand each unit length of the second tubular member.

The special technical feature of the claims of Group V is the tubular member being processed after it has been positioned within a preexisting structure until it is characterized one or more final characteristics.

Inventions of Groups I-V lack unity because they do not rely on the same special technical feature as pointed out above
